1. CLOSE OUT REPORT PURPOSE

The purpose of this “close-out” report is, prior to de-commissioning, to summarise the data from the instrumentation included in this document and to relate it to the tunnel construction activities which produce any observed changes.

The report shall demonstrate that the rate of change in the data has reached an acceptably small rate either in accordance with specified rates (settlement rate is equal or less than 2 mm/annum for a minimum period of 12 months – C122-OVE-C2-DDJ-CR001_Z-30002_ Instrumentation and Monitoring Combined I&M Monitoring Frequency C300, C305_Rev C02 and Materials and Workmanship Specification Instrumentation and Monitoring_Rev 6.0 C122-OVE-Z4-RSP-CR001-00007).

2. LOCATION OF THE WORKS

All the boreholes and levelling points are located inside or around the Crossrail/DSJV Ham and Wick site west of the A12. The site is west of the Pudding Mill Lane Portal from where two TBMs have been launched in order to bore drive Z.

There is a total of seventeen boreholes; 10 boreholes as per the method statement and additional seven boreholes instructed and covered by short notices changes.

Four of the Boreholes of the Method statement fall within the DSJV Ham & Wick Site and the other six fall outside of the site on the surrounding streets (Wrexham Rd and Baldock Street).

There is a total of fifty-five levelling points installed. Some of them were damaged on site and replaced as per short notice change.

See Appendix A for the instrument location.

6. SUMMARY OF THE DATA

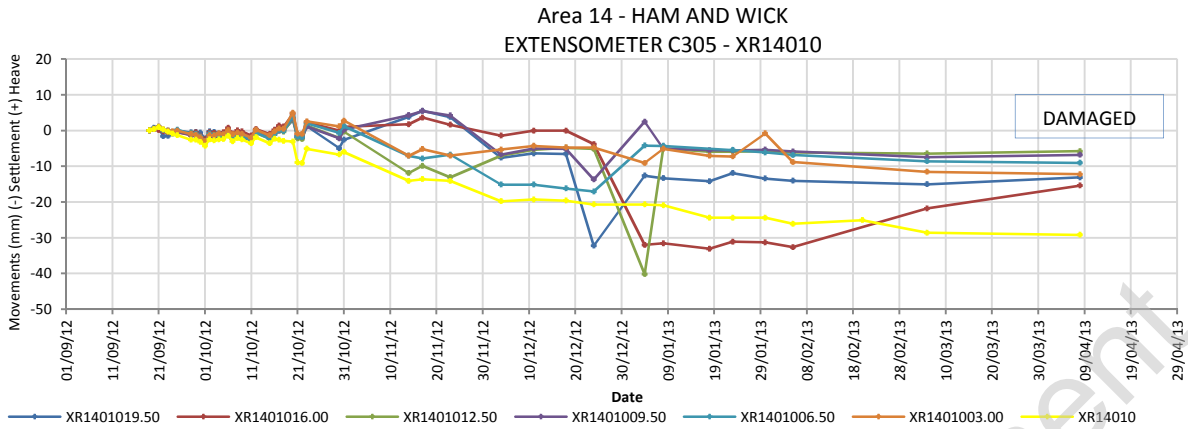

Note: For the following data plots (including data presented in Appendix B and C) #N/A refers to instances where readings were not taken for that sensor (e.g. damaged sensor, not access, etc)

EXTENSOMETERS

- Instrument Type: ROD EXTENSOMETER
- Quantity: 5

C305-XR14010

The extensometer C305 – XR14010 has been damaged by moving crane/traffic in site.

C305-XR14020

The extensometer C305-XR14020 showed 7 mm settlement on the Head from the Eastbound TBM crossing and an additional 6 mm settlement from the Westbound TBM crossing.

Rod at 15m depth has a 26 mm settlement during the EB TBM crossing.

The calculation process of the predicted movement over a one-year period is shown in the table below.

For this annual projection a linear trend line is estimated for every rod. The adjustment has been done using Excel. This application uses the method of least squares to find a line that best fits the points.

The table below shows the slope or gradient of the adjusted line for every rod.

The annual rate (mm/year) is determined by the slope of this line for 365 days ahead. If this rate is positive, it indicates the predicted movement is a heave, whereas if the result is negative a settlement is observed.

Using the last three readings which indicate stability in the data a linear trend line is estimated. The annual rate (mm/year) is determined by the slope of this line for 365 days.

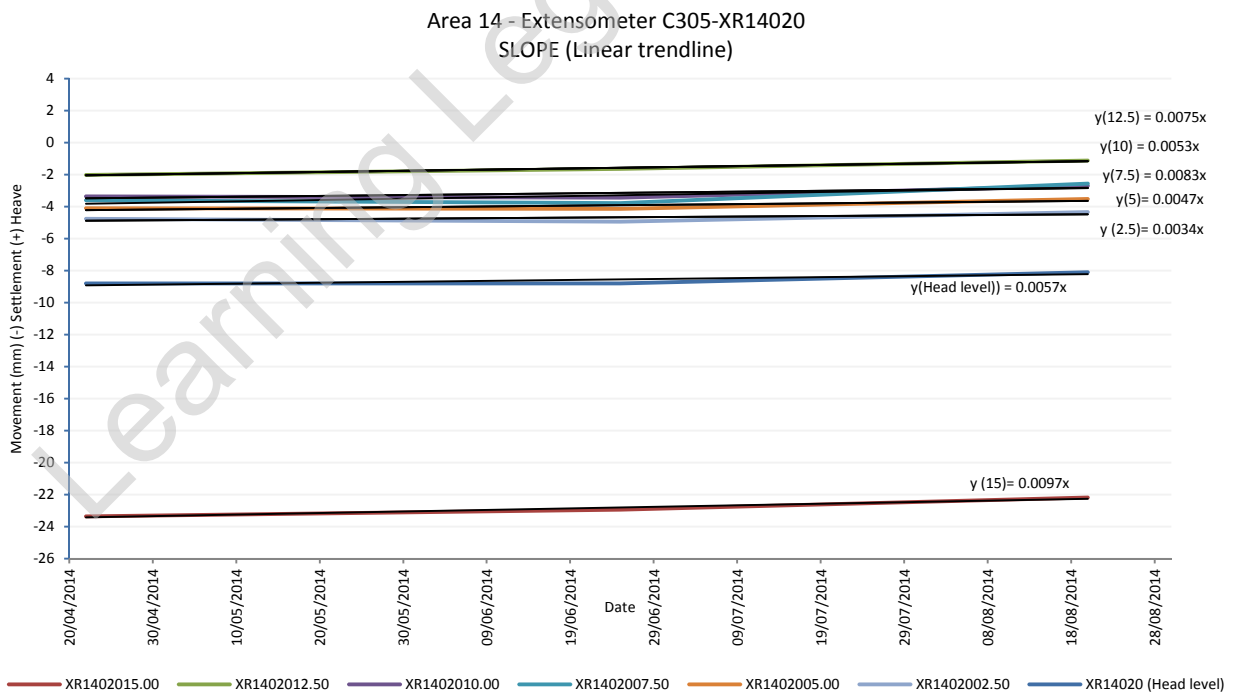

| | Recorded Movement (mm) | | | Slope (Linear Trend line) | Predicted Movement (mm) | Rate (mm/Year) | Average rate (mm) |
|----------------------|------------------------|------------|------------|---------------------------|-------------------------|----------------|-------------------|
| | 22/04/2014 | 25/06/2014 | 20/08/2014 | | 21/08/2015 | | |
| XR1402015.00 | -23.36 | -22.94 | -22.19 | 0.0097 | -18.65 | 3.54 | 2.33(*) |
| XR1402012.50 | -2.02 | -1.64 | -1.12 | 0.0075 | 1.62 | 2.74 | |
| XR1402010.00 | -3.36 | -3.44 | -2.7 | 0.0053 | -0.77 | 1.93 | |
| XR1402007.50 | -3.60 | -3.79 | -2.57 | 0.0083 | 0.46 | 3.03 | |
| XR1402005.00 | -4.11 | -4.15 | -3.53 | 0.0047 | -1.81 | 1.72 | |
| XR1402002.50 | -4.76 | -4.94 | -4.34 | 0.0034 | -3.10 | 1.24 | |
| XR14020 (Head level) | -8.80 | -8.8 | -8.1 | 0.0057 | -6.02 | 2.08 | |

Note: All the movements (except for the slope) are in mm. (-) Settlement / (+) Heave

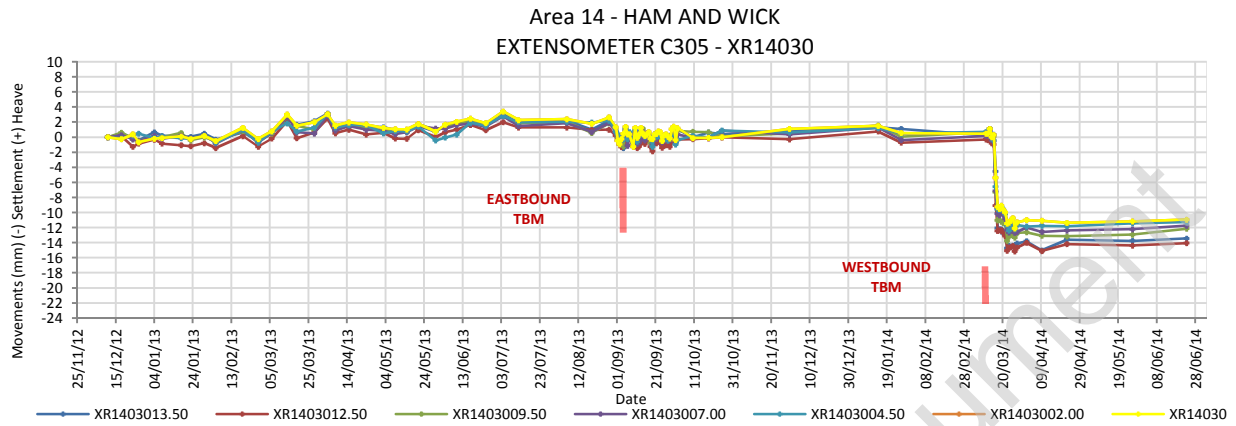

(*) The average rate is only estimated as an indicator. This value is not representative of extensometer depths

As can be observed in the previous table the predicted rate is always positive and it consequently means heave for all the rods.

The next plot shows the Excel trend line adjustment for every rod.

C305-XR14030

C305-XR14030 shows 2 mm settlement on the Head from the Eastbound TBM crossing. An additional 14 mm settlement on the head is observed with the Westbound TBM and a maximum of 4 mm differential in the ground.

INCLINOMETERS

- Instrument Type: INCLINOMETER
- Quantity: 2

Two Inclinometers have been installed. The cumulative deflection data are attached in the Appendix C. A drawing in both instruments includes orientation of "A" and "B" axis and the distance of the instrument from the nearest tunnel drive.

Orientation of the probe and casing:

A axis: the direction of the anticipated movement

A+ = the orientation of the casing groove into which the leading wheel of the inclinometer probe is located on the first run of a set of readings. This is also the orientation of the primary sensor

A- = the orientation of the casing groove into which the leading wheel of the inclinometer probe is located on the second run of a set of readings. This is also the orientation of the primary sensor

B+ = the orientation of the secondary sensor during the first run of a set of readings

B- = the orientation of the secondary sensor during the second run of a set of readings

C305-IM140010

The dates when the TBMs were immediately adjacent to the inclinometer are as follows:

| | | |
|-------------------|----------|------------|
| Eastbound Drive-Z | Ring 77 | 21/09/2013 |
| Westbound Drive-Z | Rings 73 | 15/03/2014 |

No correction has been applied to the axis probe readings for zero shift. It plays no part in the deflection or profile calculation and has no effect on the accuracy of the probe. No corrections have been applied for systematic errors.

Corrections have been applied only in probe changes. The data (readings) included in the Appendix B are the original readings. A factor of change between probes has been applied in order to calculate the differences, as can be seen in the table below.

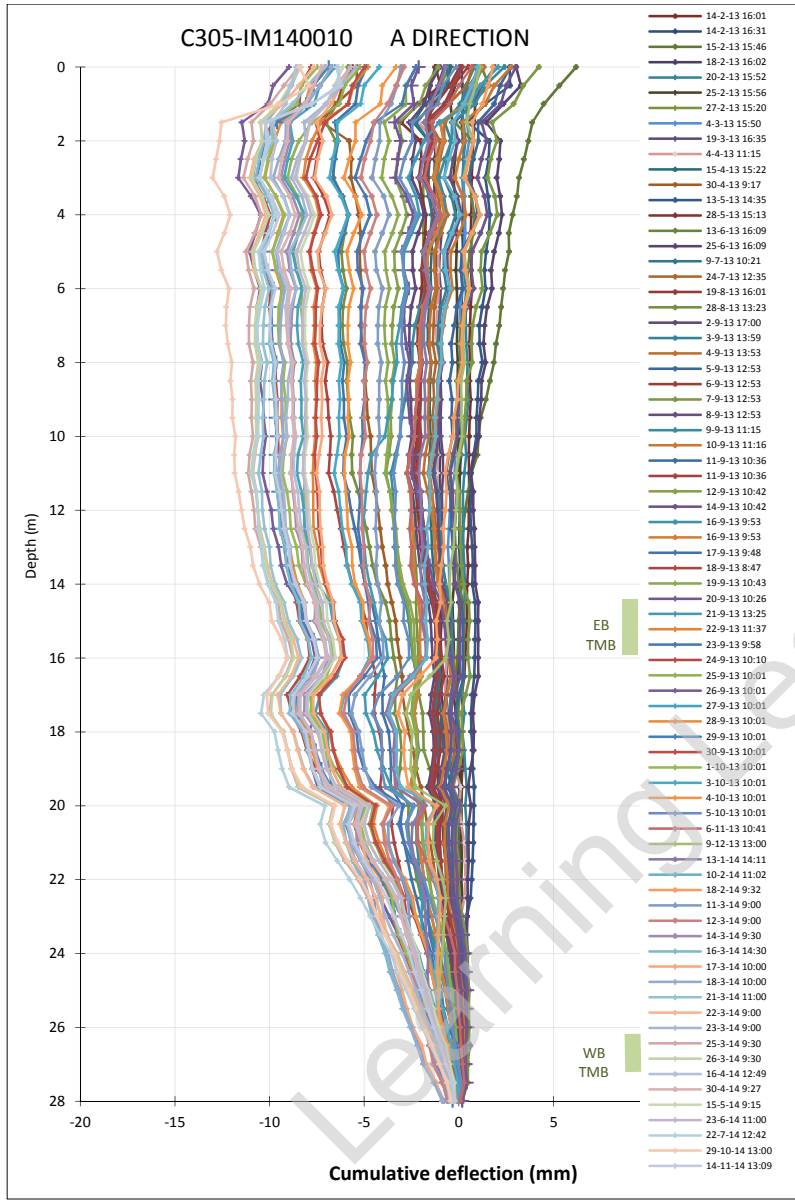

| Date | 19/03/2013 (gkn2) to 04/04/2013 (gkn1) | | | |
|--------|----------------------------------------|------|----|------|
| Axis A | A+ | -54 | A- | -16 |
| Axis B | B+ | -50 | B- | -15 |
| Date | 06/11/2013 (gkn1) to 09/12/2013 (gkn2) | | | |
| Axis A | A+ | -147 | A- | -100 |
| Axis B | B+ | -157 | B- | -135 |
| Date | 18/03/2014 (gkn2) to 21/03/2014 (gkn1) | | | |
| Axis A | A+ | 126 | A- | -153 |
| Axis B | B+ | 150 | B- | -181 |

For the inclinometer C305-IM140010 three changes were made between the probe Gkn1 and Gkn2. The factors in the table have been added to the readings taken with that probe.

An evaluation of the data "checksum" has been carried out in order to find errors or erroneous readings. The two values obtained in diametrically opposite directions and at the same depth have been added and checked that these values vary by about +/- 20 digits around the average value. This interval can be larger for the axis B due to the required wheel tolerance in the track.

That procedure have been carried out during the course of the survey.

C305-IM140010 recorded on A-axis a maximum displacement of 4 mm at 17 m depth and on B-axis a maximum of 4 mm at a 15.5 m depth during the Eastbound TBM crossing. During the Westbound TBM crossing the maximum displacement is 1 mm on both axis and at the same depths.

C305-IM140020

The dates when the TBMs were immediately adjacent to the inclinometer are as follows:

| | | |
|-------------------|----------|------------|
| Eastbound Drive-Z | Ring 97 | 29/09/2013 |
| Westbound Drive-Z | Rings 92 | 25/03/2014 |

No correction has been applied to the axis probe readings for zero shift. It plays no part in the deflection or profile calculation and has no effect on the accuracy of the probe. No corrections have been applied for systematic errors.

Corrections have been applied only in probe changes. The data (readings) included in the Appendix B are the original readings. A factor of change between probes has been applied in order to calculate the differences, as can be seen in the table below.

| Date | 6/11/13 (gkn1) to 13/01/2014 (gkn2) | | | |
|--------|-------------------------------------|------|----|-----|
| Axis A | A+ | -168 | A- | 147 |
| Axis B | B+ | -145 | B- | 114 |

For the inclinometer C305-IM140020 all the readings were taken with the same probe (as well as for the baseline readings). Only one change was made on the 13rd January, 2014 between the probe Gkn1 and Gkn2. The factors in the table have been added to the readings taken with that probe.

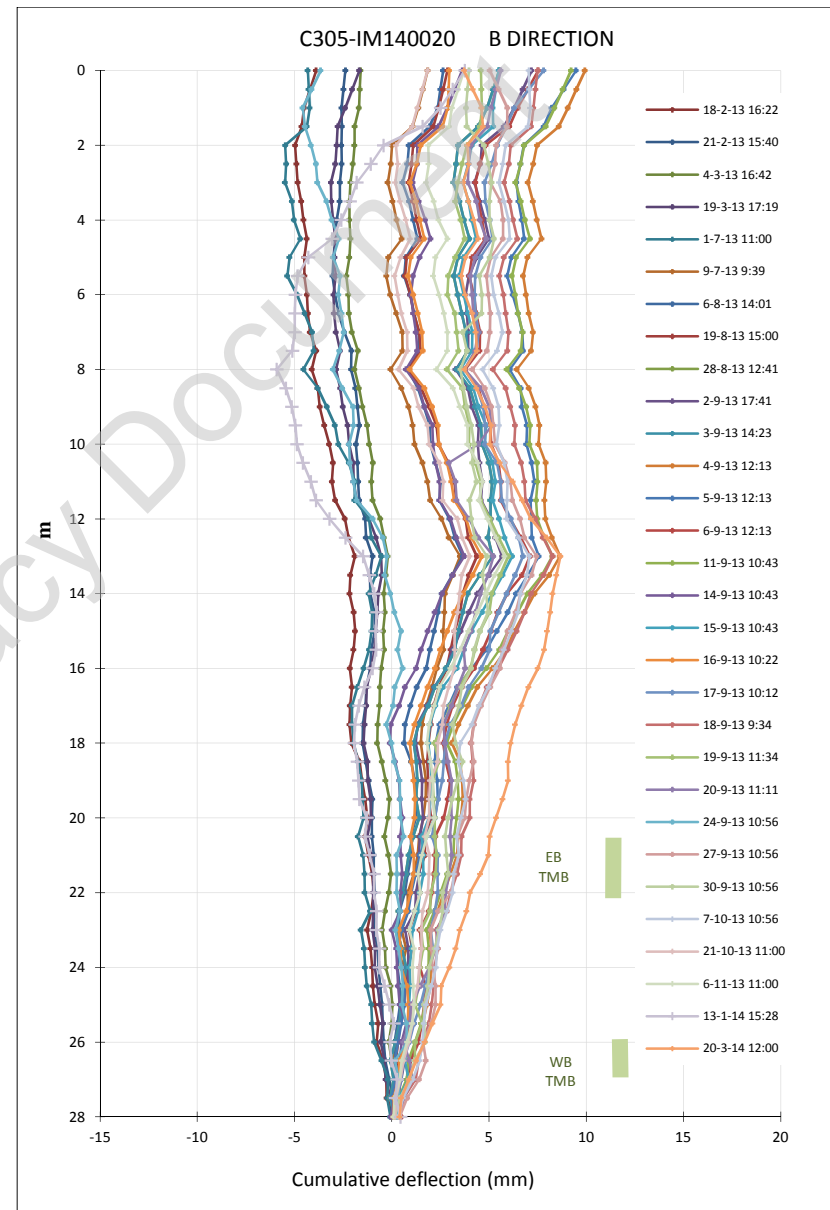

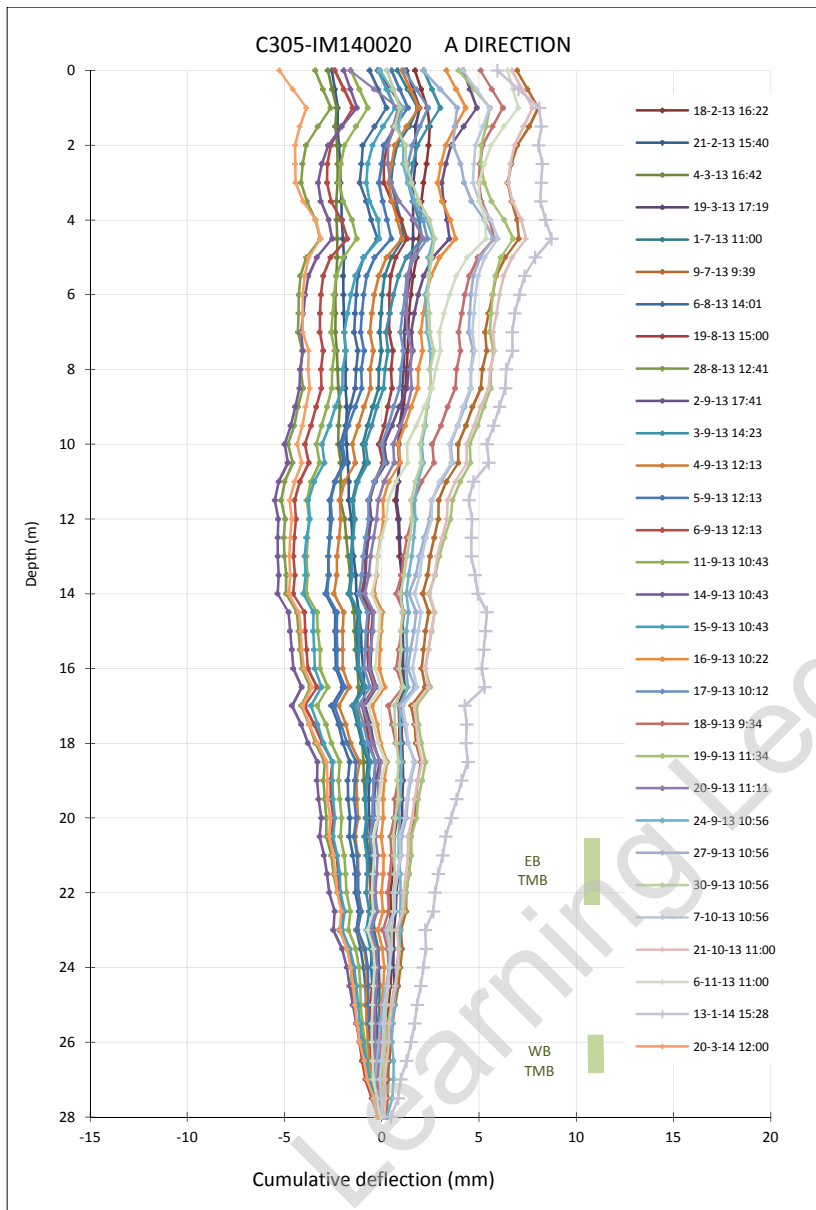

An evaluation of the data "checksum" has been carried out in order to find errors or erroneous readings. The two values obtained in diametrically opposite directions and at the same depth have been added and checked that these values vary by about +/- 20 digits around the average value. This interval can be larger for the axis B due to the required wheel tolerance in the track.

That procedure have been carried out during the course of the survey.

C305-IM140020 recorded on A-axis and B-axis a maximum displacement of 1 mm at 17 m and 15.5 m depth, respectively, during the Eastbound TBM crossing.

No readings have been taken for the Westbound TBM passage. Reference EWN N° 45012-S-EWN-177 Unable to Continue Long Term Readings Ridgale Street (Ham & Wick). The surveying team was not able to take the reading for C305-IM140020 located in Ridgale Street due to parked vehicles preventing access.

PIEZOMETERS

- Instrument Type: PIEZOMETER
- Quantity: 4

Four piezometers have been installed. Two standpipes that were installed for construction purposes by other DSJV contractors are not covered in this report.

C305-PV14010

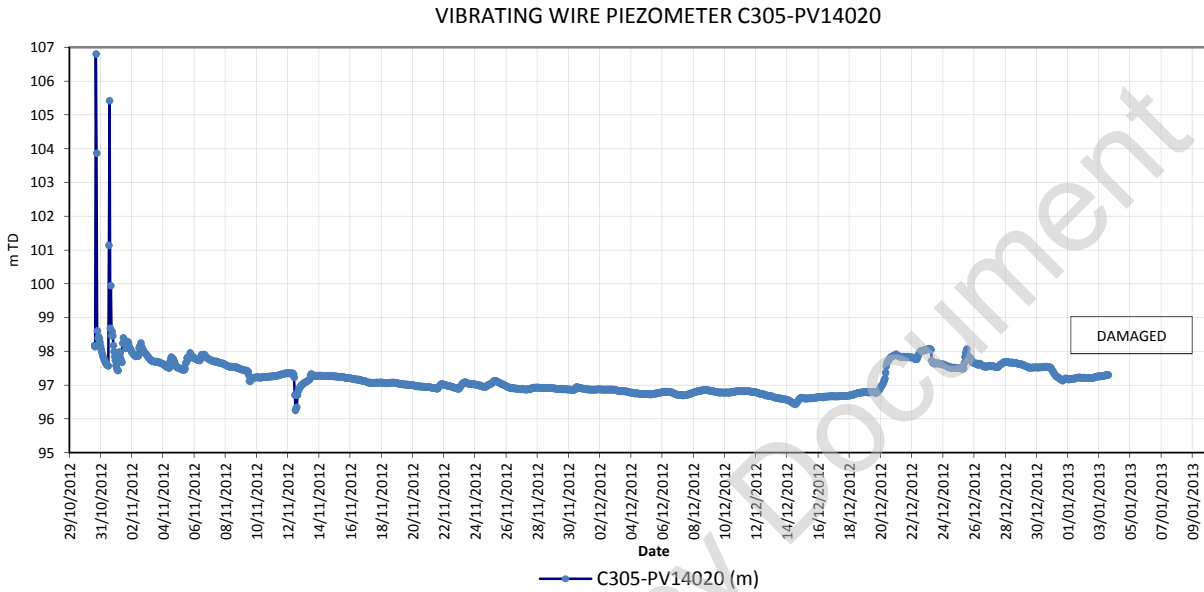

Spikes in the data before the period of TBM transit can reflect works in the system (turning the wells on & off, checking draw down levels) etc.

As can be seen in the graph above for the piezometer C305-PV14010 there is a drop in the water level of 7 m linked to the depressurisation in the Eastbound and 5 m for the Westbound.

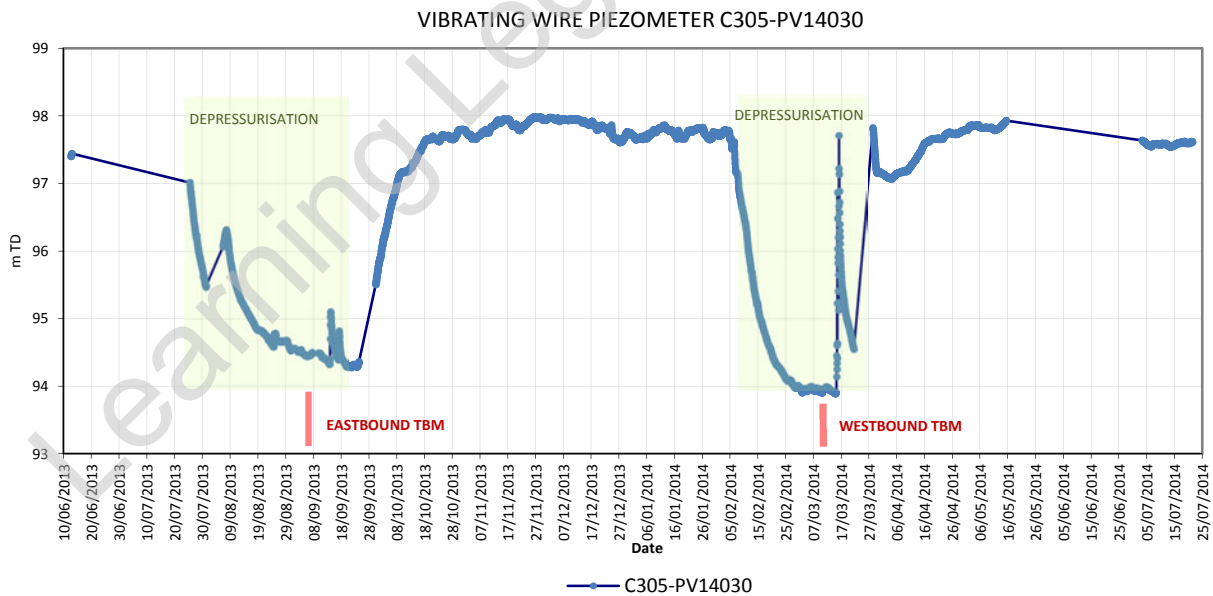

Related to the Eastbound TBM crossing from 6/9/2013 to 20/9/2013 a level water drop is observed between two spikes and no significant change in water level during the Westbound crossing.

C305-PV14020

The piezometer C305-PV14020 was damaged at the beginning of January 2013.

C305-PV14030

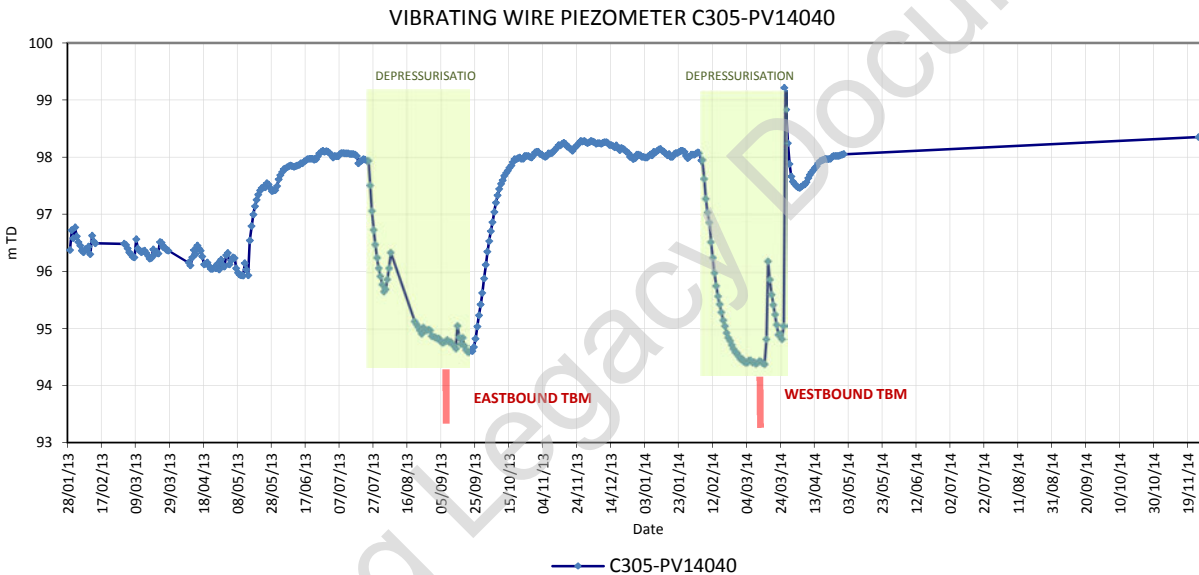

Spikes in the data before the period of TBM transit can reflect works in the system (turning the wells on & off, checking draw down levels) etc.

As can be seen in the graph for the piezometer C305-PV14030 above there is a drop in the water level of 2.5 m linked to the depressurisation in the Eastbound and 3.5 m for the Westbound.

C305-PV14040

Spikes in the data before the period of TBM transit can reflect works in the system (turning the wells on & off, checking draw down levels) etc. An increase in the water level can be observed in May 2013. the exact cause for this increase is not known.

As can be seen in the graph for the piezometer C305-PV14040 below there is a drop in the water level of 3 m linked to the depressurisation in the Eastbound and 3.5 m for the Westbound.

LEVELLING POINTS

- Instrument Type: LEVELLING POINTS
- Quantity: 1

This levelling section (Transect 14A) was damaged during site works on several occasions and levelling points were reinstalled using different number scheme.

The following table shows the number scheme with the dates for the installation, the baseline and the last reading prior to be damaged. The last column shows the notation of the levelling points arrays.

| 08/04/2014 | 08/04/2014 | 12/07/2014 | C305-LP14382 to C305-LP14391 |

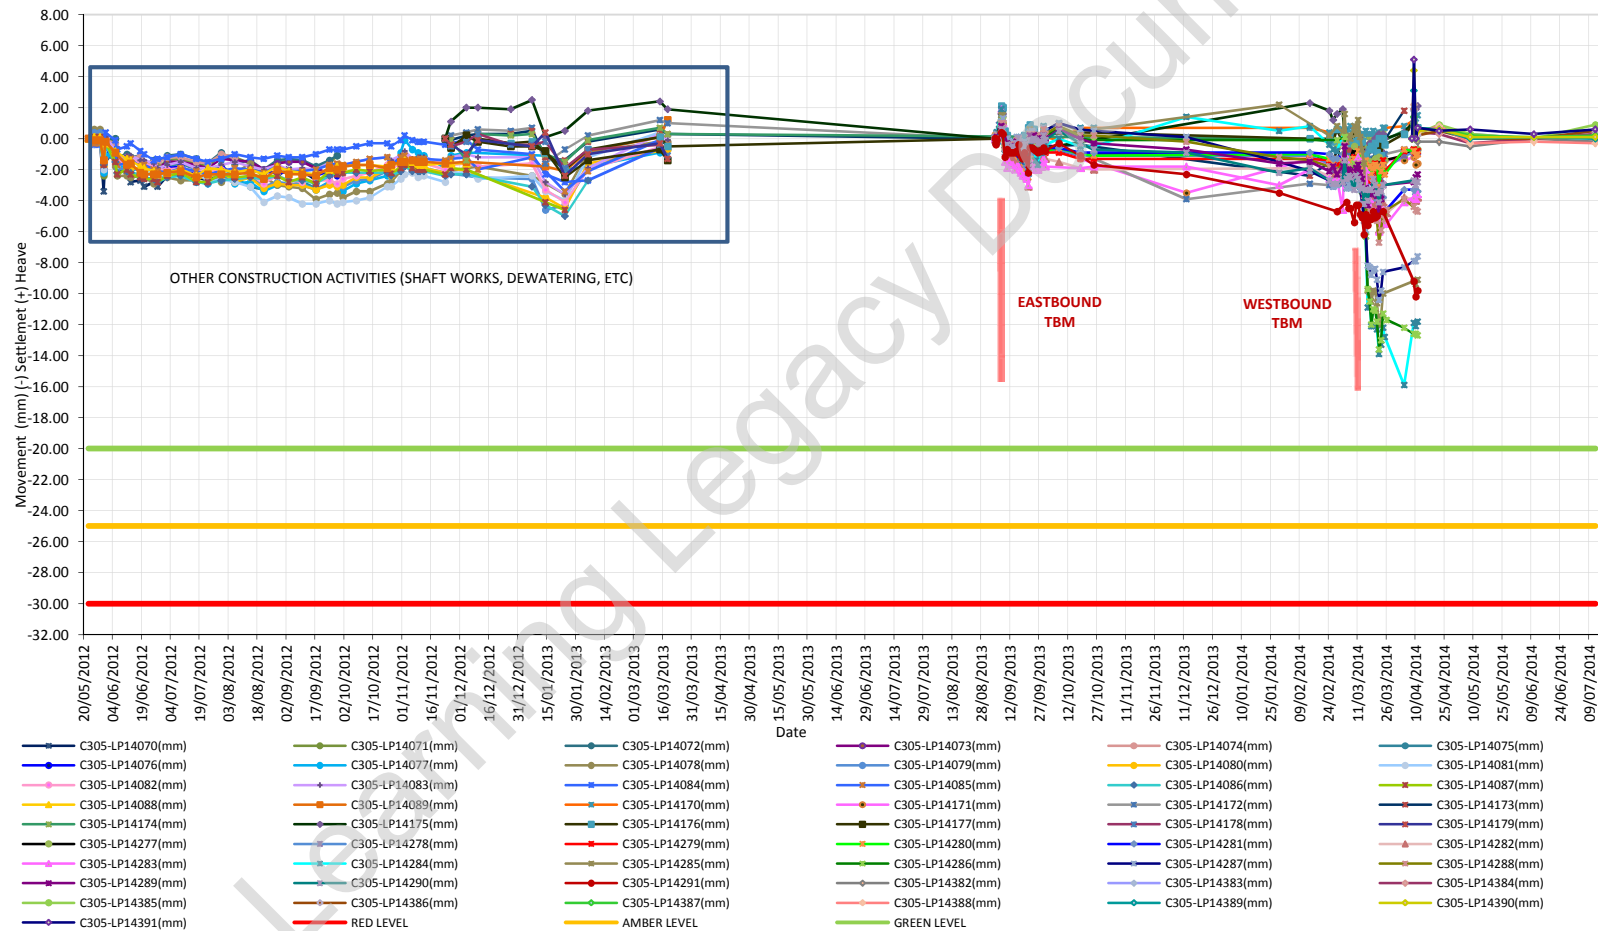

The series C305-LP14277 to C305-LP14291 was installed prior to the Eastbound TBM crossing.

The movements registered in Transect 14A are summarised in the plots as follows:

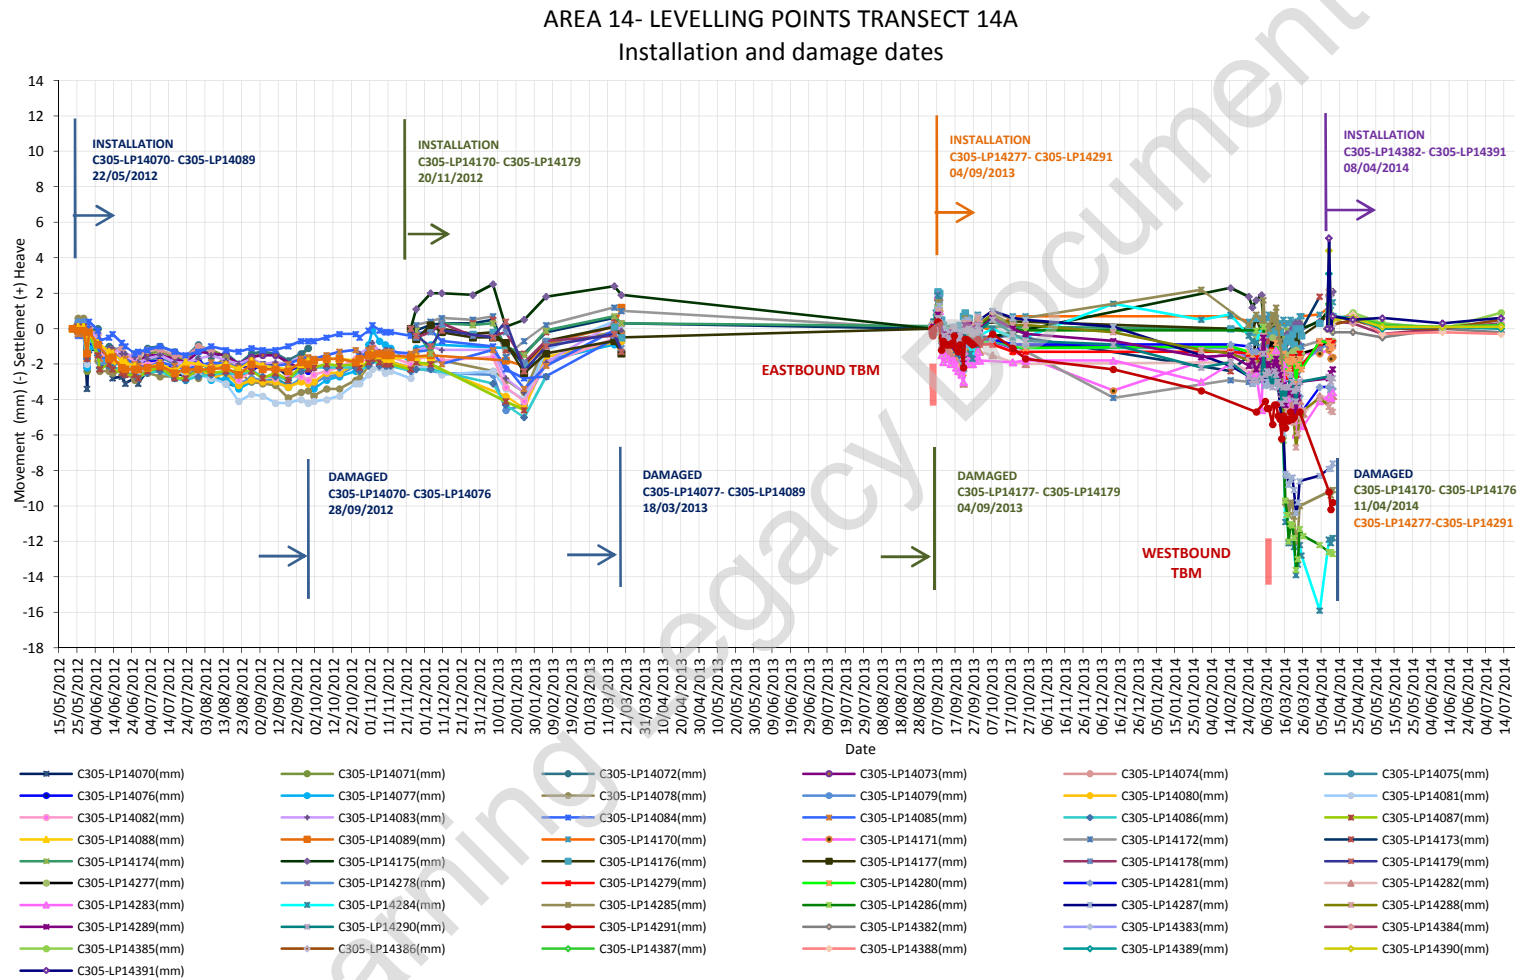

- Transect 14A. The trigger levels and both TBMs crossing can be observed in this plot
- Transect 14A. Dates when the different levelling points arrays were installed and damaged. No offsets have been applied for the new levelling points installed
- Eastbound TBM crossing (zoom)
- Westbound TBM crossing (zoom)

From May 2012, when the first levelling points were installed, to March 2013 and prior to the TBMs crossing, different movements can be observed in the graph below. They can be due to different construction activities (shaft works, dewatering, etc). A settlement (-4 mm) is observed until October 2012, followed by a heave (+2 mm) in November 2012 and a new settlement (-2 mm) in January 2013. In March 2013 the level ranges between 2 and -1 mm.

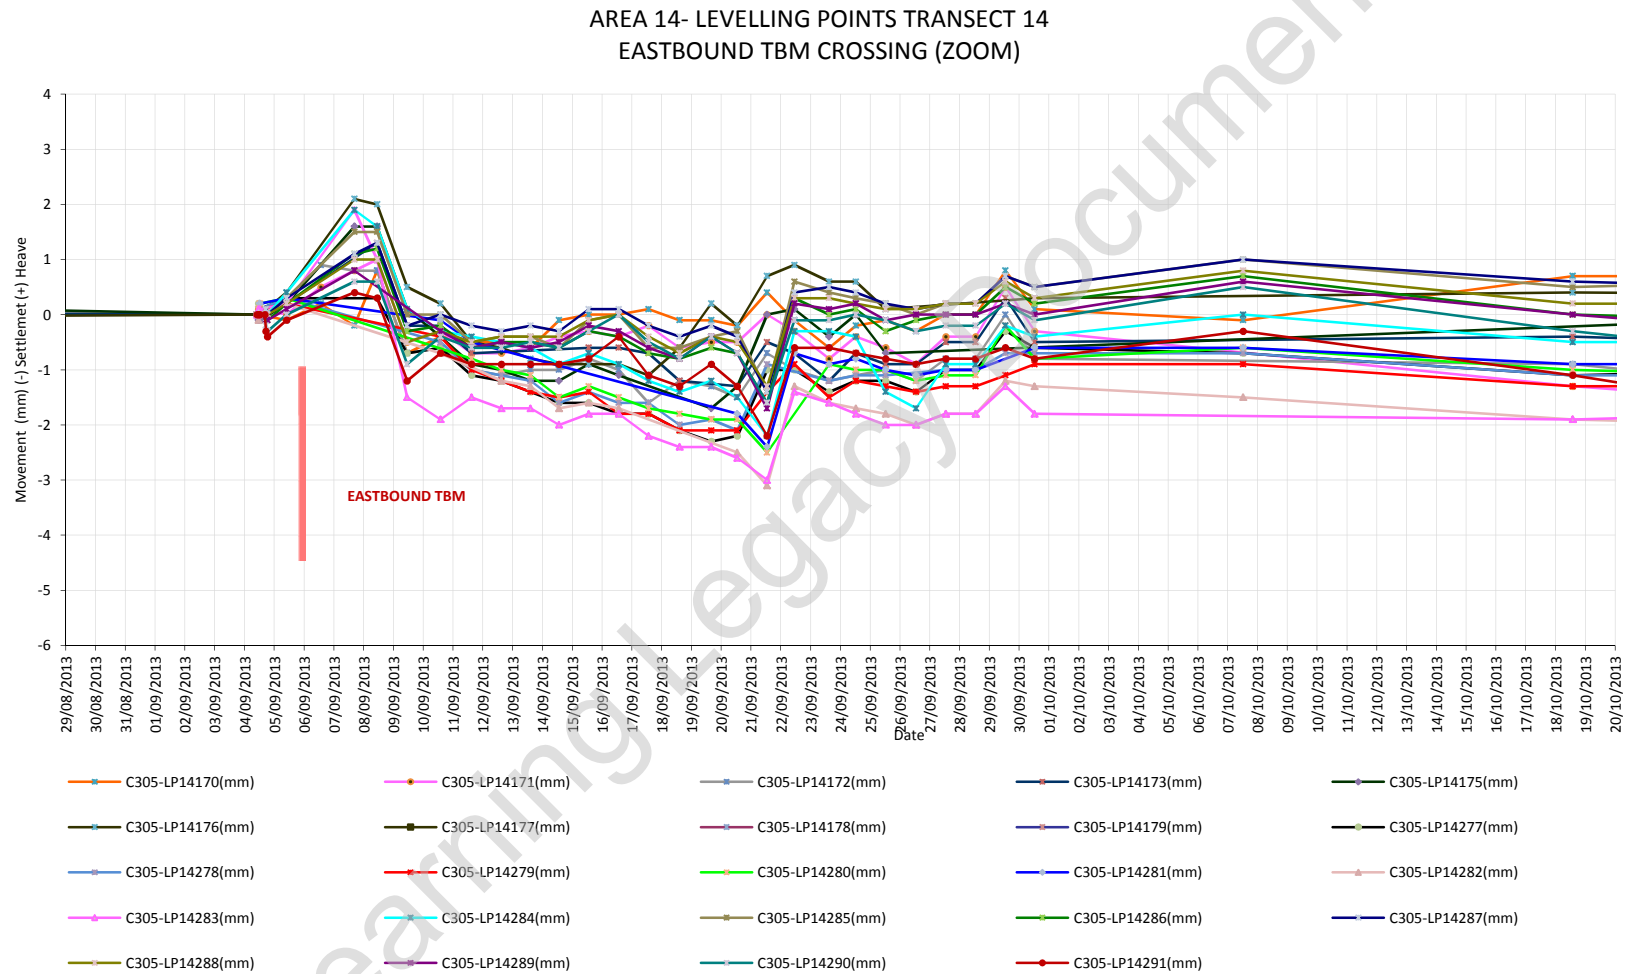

AREA 14- LEVELLING POINTS TRANSECT 14

The following plot shows the different dates when the levelling points were installed and damaged.

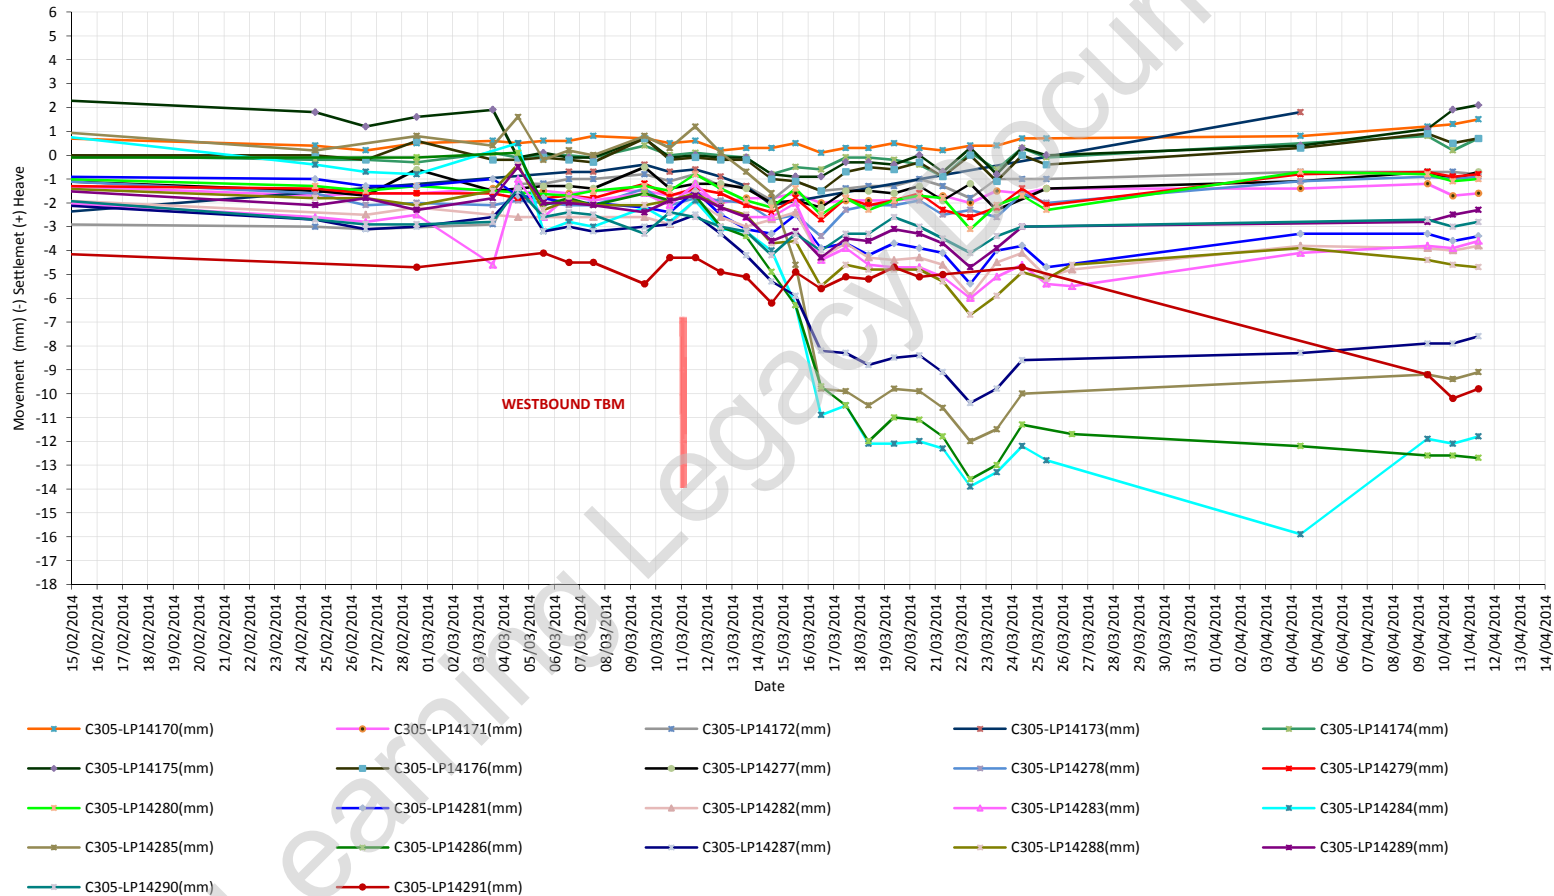

As can be observed in the Eastbound TBM crossing zoom below, there is a heave of +2mm followed by a settlement of -3mm after the Eastbound TBM crossing.

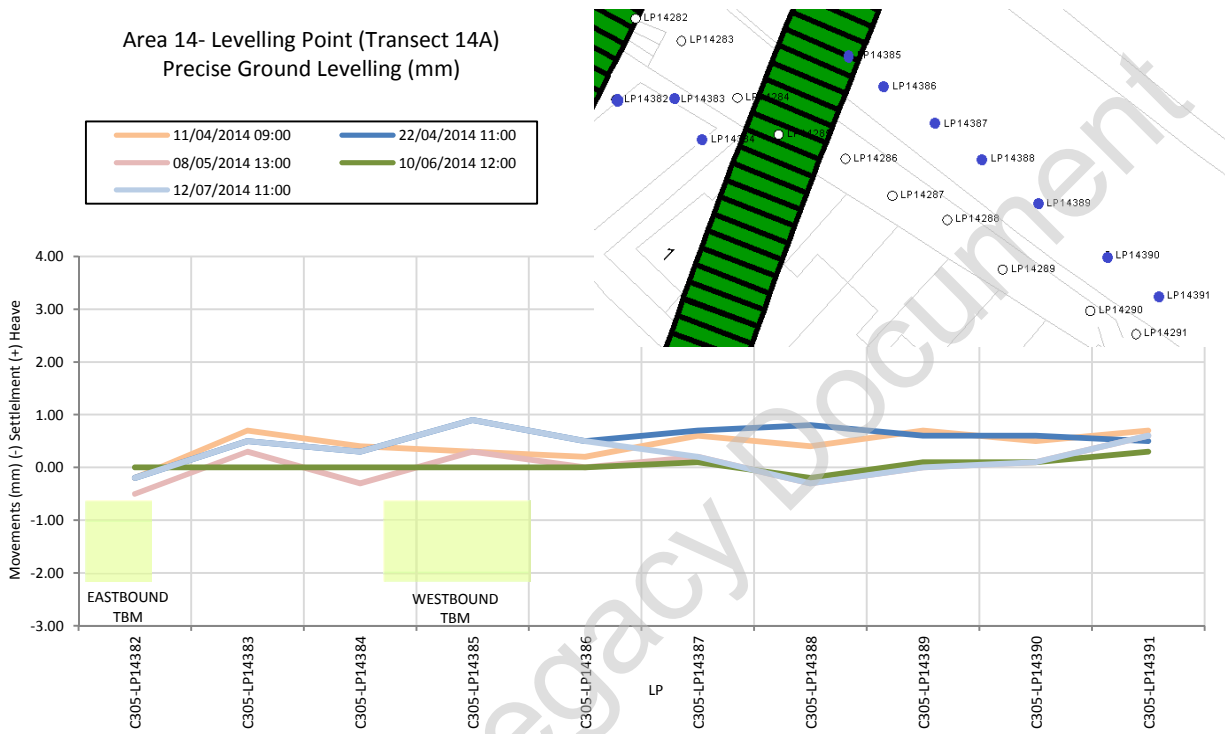

A maximum settlement of -11mm can be observed in the following graph for the levelling points C305-LP14284 to C305-LP14287 after the Westbound TBM crossing.

AREA 14- LEVELLING POINTS TRANSECT 14
 WESTBOUND TBM CROSSING (ZOOM)

The next graphic shows the location of the last levelling points array installed (C305-LP14382 to C305-LP14391) as well as East and West bound. For the profile plot the last five reading, from April 2014 to July 2014, are incorporated. These measurements are between 1 and -1 mm and have been used to calculate the predicted settlement.

The calculation process of the predicted movement over a one-year period is shown in the table below.

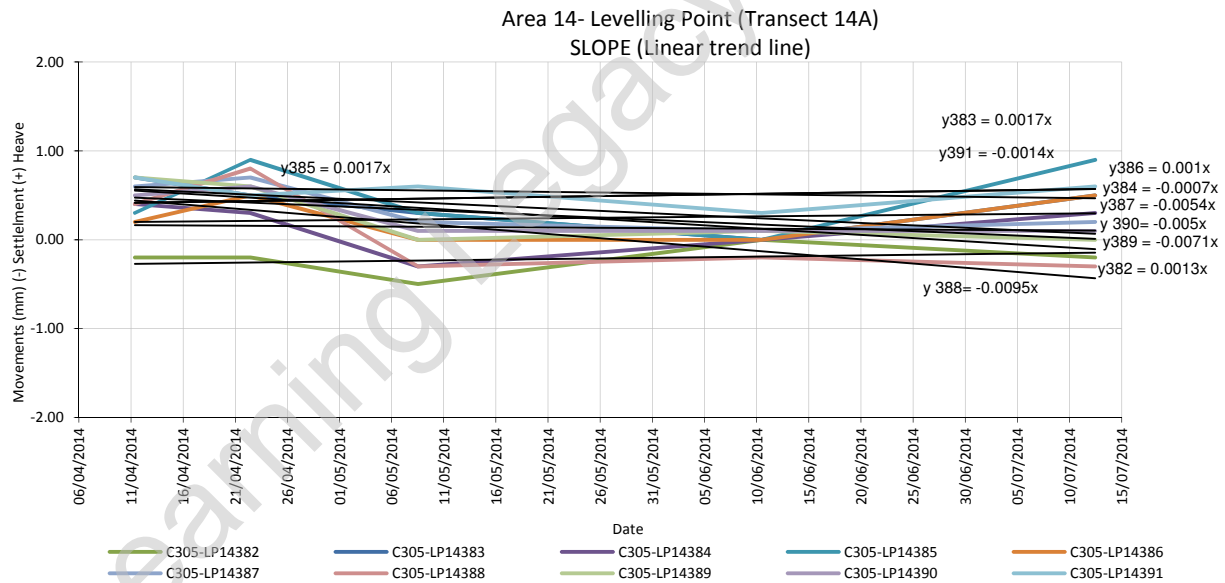

For this annual projection a linear trend line is estimated for every levelling point. The adjustment has been done using Excel. The table shows the slope or gradient of the adjusted line for every levelling point.

The annual rate (mm/year) is determined by the slope of this line for 365 days ahead. If this rate is positive, it indicates the predicted movement is a heave, whereas if the result is negative a settlement is observed.

There are two levelling points with a rate higher than 2 mm, but the average rate for this Transect is a settlement of -0.85 mm, less than the 2 mm/year in the specification.

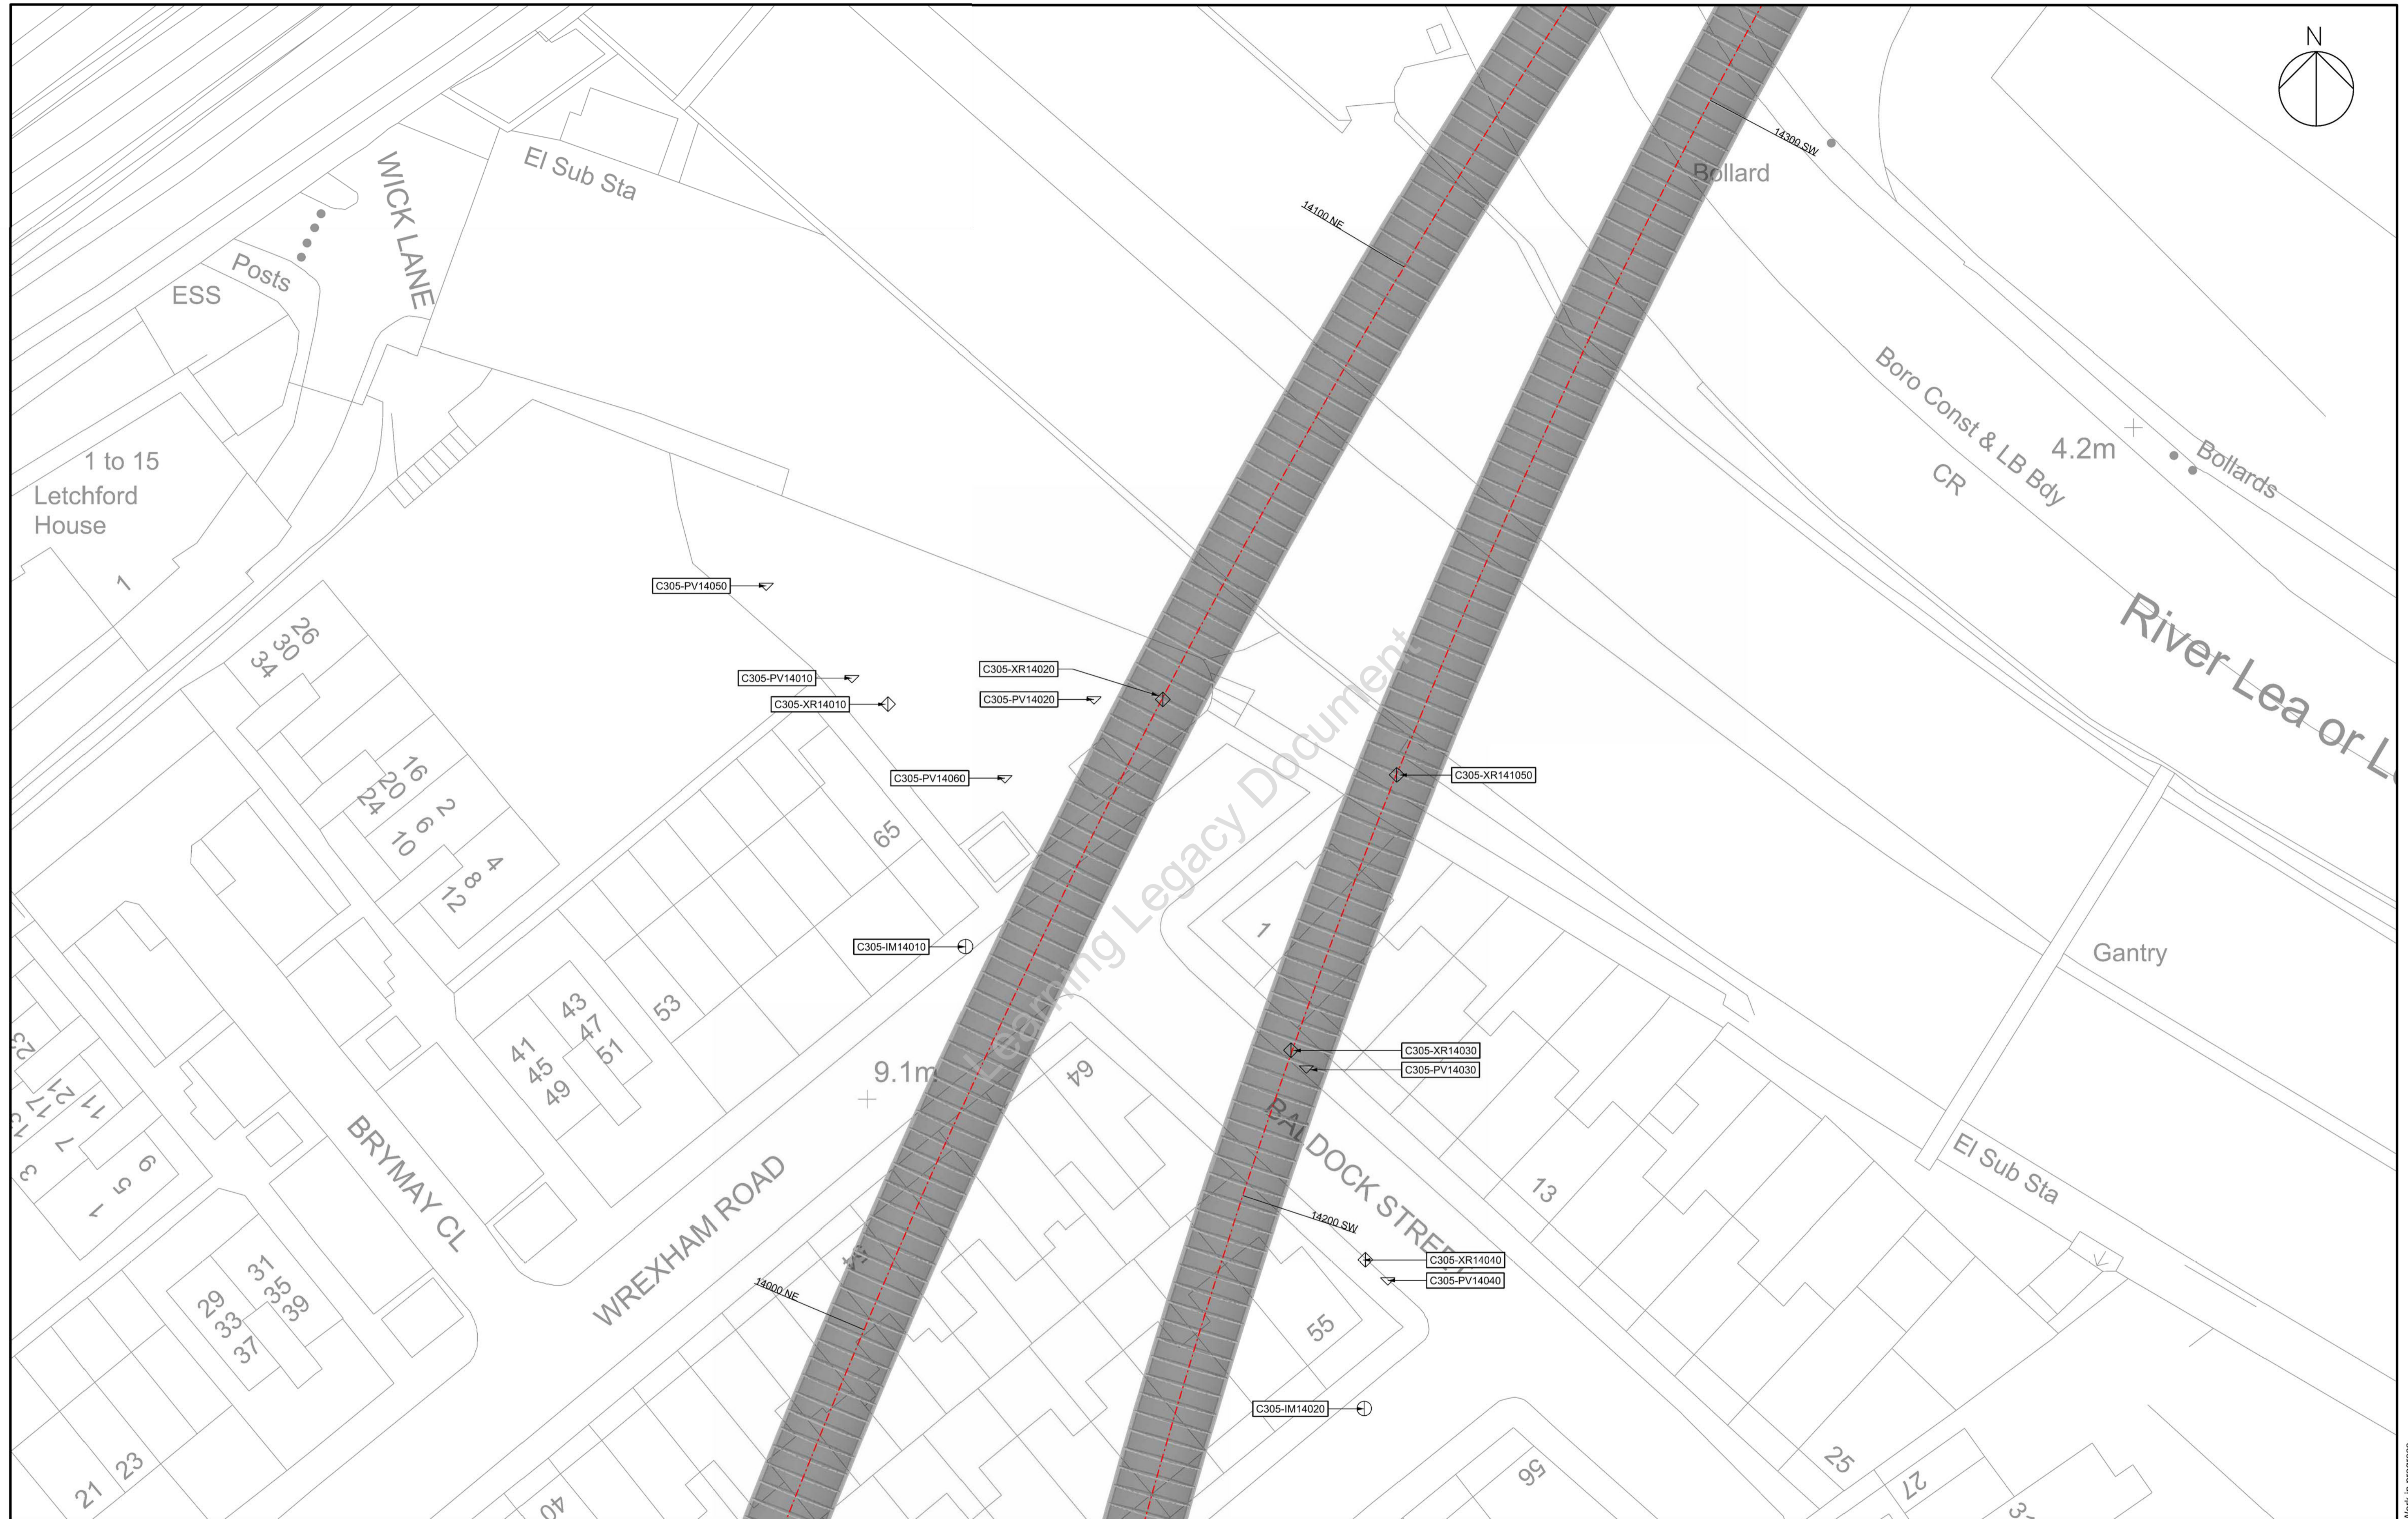

The next plot shows the Excel trend line adjustment for every levelling point.

According to specifications and Monitoring Frequency (C122-OVE-C2-DDJ-CR001_Z-30002_Rev C02) the monitoring of the instrument can be completed.
